

National Implementation Plans and Reporting Obligations under Stockholm Convention

GGKP Webinar Article 15 in Practice: National Reporting and ERS Guidance

Mihaela Claudia PAUN, Programme Management Officer
Chemicals and Health Branch, Industry and Economy Division

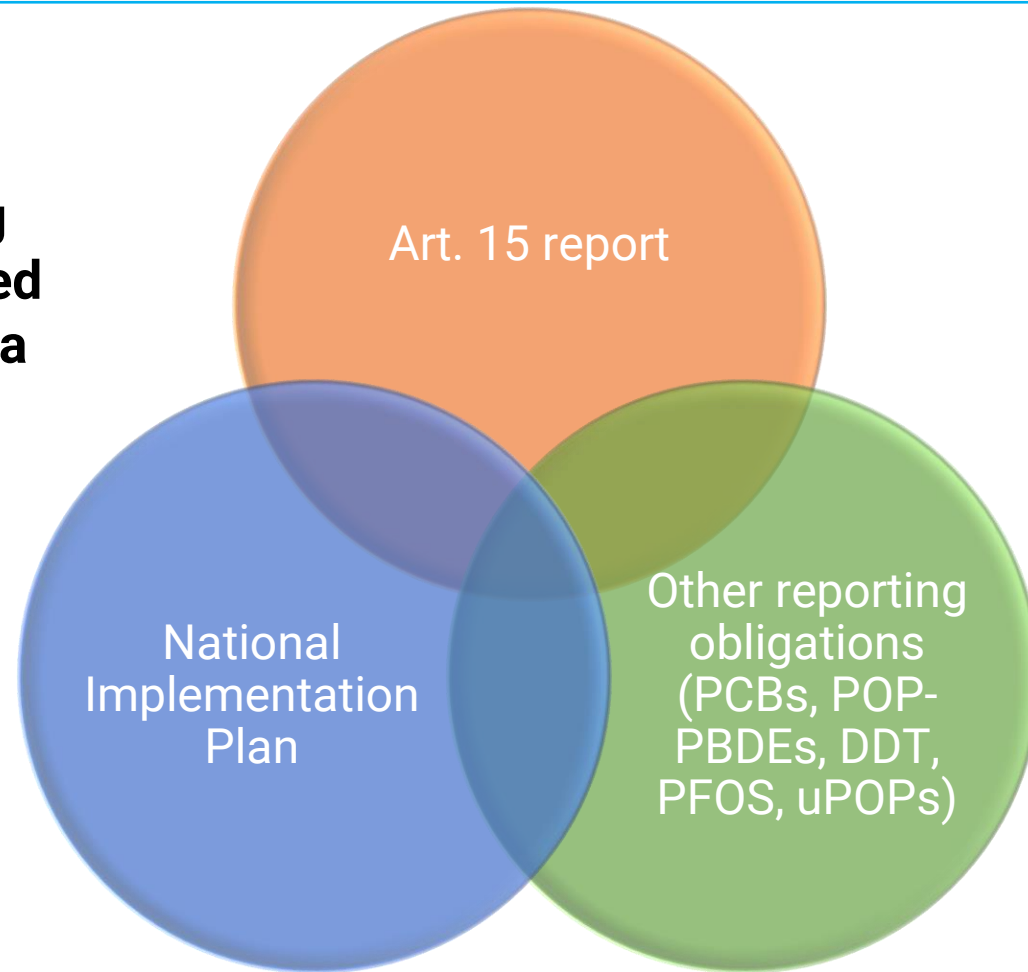

Guidance on Supporting the Process of Data Collection, National Reporting and Modality for Final Quality Check (2024)

Available here: <https://www.greenpolicyplatform.org/guidance/guidance-supporting-process-data-collection-national-reporting-and-modality-final-quality>

Interlinkages between NIP & national reporting

**Aprox. 90%
of the data reporting
obligations are covered
by NIP generated data**

Overview of overlaps and gaps

Overlaps

- Information required under Article 15 and other reporting obligations under the Convention **LARGELY OVERLAPS** with the information generated through the NIP development and/or update process.

Gaps

- Limited level of detail of NIP generated information.
- No NIP generated information.
- Lack of correlation with the reporting obligations.

Conclusions

By following closely the guidance documents for NIP development and/or update, relevant information and data are generated to enable Parties fulfilling the reporting obligations under the Stockholm Convention.

Even the guidance documents for NIP development and/or update are used in their entirety, certain limitations remain in generating all information and data required to comply with the reporting obligations under the Stockholm Convention.

Limitations: internal e.g. lack of reporting mechanisms, financial and technical capacities, and external e.g. no streamlined formats for reporting under Article 15 and other reporting obligations under the Stockholm Convention with the NIP development and/or update format.

Additional efforts by Parties are required to generate the information necessary to comply with the reporting obligations under the Stockholm Convention.

Thank you
